in aristotle s teleological view of the world natural things come to be and are present for the sake of some function or end for example wings are present in birds for the sake of flying whereas much of recent scholarship has focused on uncovering the meta physical underpinnings of aristotle s teleology and its contrasts with his notions of chance and necessity this book examines aristotle s use of the theory of natural teleology in producing explanations of natural phenomena close analyses of aristotle s natural treatises and his posterior analytics show what methods are used for the discovery of functions or ends that figure in teleological explanations how these explanations are structured and how well they work in making sense of phenomena the book will be valuable for all who are interested in aristotle s natural science his philosophy of science and his biology

this volume distinguishes between two main traditions in the philosophy of

science the aristotelian with its stress on explanation in terms of purpose and intentionality and the galilean which takes causal explanation as primary it then traces the complex history of these competing traditions as they are manifested in such movements as positivism idealism marxism and contemporary linguistic analysis hempels s theory of scientific explanation the claims of cybernetics the rise of an analytic philosophy of action and the revival of hermeneutics are all discussed the volume also deals with causal explanation intentionality and teleological explanation and explanation in history and the social sciences the author concludes that explanation of human actions cannot be reduced to simple causality and discusses the implications of this conclusion for the disciplines of history and sociology

monte johnson examines the most controversial aspects of aristotle s natural philosophy his teleology is teleology about causation or explanation does it exclude or obviate mechanism determinism or materialism is it focused on the good of individual organisms or is god or man the ultimate end of all processes and entities is teleology restricted to living things or does it apply to the cosmos as a whole does it identify objectively existent causes in the world or is it merely a heuristic for our understanding of other causal processes johnson argues that aristotle s aporetic approach drives a middle course between these traditional oppositions and avoids the dilemma frequently urged against teleology between backwards causation and anthropomorphism although these issues have been debated with extraordinary depth by aristotle scholars and touched upon by many in the wider philosophical and scientific community as well there is no comprehensive historical treatment of the issue aristotle is commonly considered the inventor of teleology although the precise term originated in the eighteenth century if teleology means the use of ends and goals in natural science then aristotle was rather a critical innovator of teleological explanation teleological notions were widespread among his predecessors but aristotle rejected their conception of extrinsic causes such as mind or god as the primary causes for natural things aristotle s radical alternative was to assert nature itself as an internal principle of change and an end and his teleological explanations focus on the intrinsic ends of natural substances those ends that benefit the natural thing itself aristotle s use of ends was subsequently conflated with incompatible teleological notions including proofs for the existence of a providential or designer god vitalism and animism opposition to mechanism and non teleological causation and anthropocentrism johnson addresses these misconceptions through an elaboration of aristotle s methodological statements as well as an examination of the explanations actually offered in the scientific works
